## Linear Actuators

## Linear Actuators

### Linear Actuators

HIWIN linear actuators are not only employed in the fields of rehabilitation and home care but also in industrial technology. They are characterized by a light and compact design, high rigidity, user-friendly handling, easy installation and low operating noise.

An inserted gear convey the rotary motion of the engine to a buttress or a ballscrew. This one converts the rotary motion into linear motion. In addition to our standard versions HIWIN linear actuators can also be designed according to the individual wishes of our customers.

## 1. Product overview

HIWIN linear actuators LAM

[Page 10](#)

- Thrust up to 6,000 N
- Worm gears for very quiet running
- Optional with protection class IP 65/66

HIWIN linear actuators LAS

[Page 16](#)

- Thrust up to 1,800 N
- Compact design thanks to spur or planetary gears
- Optional with positioning measurement system

HIWIN linear actuators LAN

[Page 24](#)

- Thrust up to 10,000 N
- Worm gears for very quiet running
- Optional with positioning measurement system

HIWIN linear actuators LAC

[Page 37](#)

- Thrust up to 2,000 N
- Lifting column with integrated guiding
- Max torque loading capacity 500 Nm

# Linear Actuators

## General information

---

### 2. General information

#### 2.1 Selection of HIWIN linear actuators

##### Step 1: Calculating load and speed

The model selected from the various HIWIN linear actuators depends on the operating environment, the load levels, and the required speed.

##### Step 2: Required stroke and zero stroke length

The required stroke depends on the application. The zero stroke length ( $R_0$ ) is the minimum length of a linear actuator with fully retracted piston rod. Accordingly, the maximum length with fully extended piston rod is the zero stroke length plus the selected stroke.

##### Step 3: Effects on the duty cycle

Linear actuators are designed for a maximum duty cycle of 10 %. A longer duty cycle leads to excessive wear. Bending and impact loads must be avoided.

#### 2.2 Installation of the HIWIN linear actuators

- Linear actuators are delivered with their piston rod fully retracted (0 stroke). If this should prevent installation, the linear actuator may be powered to the required stroke position. If an auxiliary voltage is applied for this purpose, make sure that linear actuators without internal limit switches are protected against surge currents on reaching their end position.
- The linear actuators must be secured with bolts whose axes are parallel to each other. The linear actuator must be able to swivel about its mounting bolts. The mounting bolts must prevent twisting about the linear actuators' longitudinal axis, i.e. they must function as an antitwist lock.
- LAM, LAS, and LAN series linear actuators are not suitable for absorbing bending moments or lateral forces.
- The linear actuators' swivelling motions must be taken into account when the power lines are routed.
- Linear actuators without integrated limit switches must be connected to external limit switches or excess current monitors that switch OFF the power.
- Check that the linear actuator functions properly after installation.

##### Users should consider the following:

- The stroke selected for the linear actuator must be adequate for the application.
- The limit switches must be actuated reliably at the end of the stroke.
- At their end positions, linear actuators without integrated limit switches draw excess current that can soon damage the motors.

#### 2.3 Safe operation of HIWIN linear actuators

- The structure the linear actuators are intended to move must also serve as their guide. Unguided loads may generate bending moments that exceed the design specifications of LAM, LAS, and LAN series linear actuators.
- The linear actuator's enclosing structure may not project into its area of movement.
- The voltage supplied across the linear actuator must agree with its specifications. The electric power must be adequate for the linear actuator at its peak load.
- The current draw rises rapidly when the linear actuator is overloaded or blocked. This will damage the motor. A fuse or current limiter must be provided if excess current is not to damage the linear actuator. The current monitor must safeguard the linear actuator's automatic deactivation in the event of a malfunction.
- The maximum duty cycle of HIWIN linear actuators is 10 %. There may be two minutes of full load operation within a twenty minute period. If longer duty cycles are required, a temperature monitor must be provided. If necessary, there must be forced cooling.
- If not fitted with their own, linear actuators must be protected with suitable limit switches. Limit switches restricting the stroke can be fitted separately to the moving structure or the linear actuator.
- Linear actuators without integrated limit switches or overload protection may be operated only within the specified nominal stroke.
- Linear actuators are powered from a DC supply. The DC motor's polarity must be reversed for reversed movements. Additional braking effects can be obtained when a suitable switch is fitted to short circuit the motor. This braking effect is not generated when the equipment is stationary.

- The linear actuators must be operated within the specified load limits. Linear actuators have been approved for a range of IP codes. Make sure that the IP code corresponds to the ambient conditions.
- Depending on the linear actuator type, the piston rod may require an antitwist lock. If not locked against twisting, the piston rod may rotate in sympathy without executing a stroke.
- Linear actuators are not suitable for applications requiring high accuracies and defined speeds.
- A number of linear actuators may be fitted with a loose coupling. The units then generate thrust forces only. Under tractive forces, the piston rod slides out of the linear actuator to its stop. This option helps to prevent damage or injury from suddenly dropping structures.

## 2.4 Features and applications

### 2.4.1 Features of the linear actuators

- Compact and light design
- User-friendly
- Easy to assemble
- Low noise motors
- Stable structure
- Optimal value for money

### 2.4.2 Applications

- Automation equipment
- Door and window drives
- Movable furniture
- Aerial tracking
- Wheel chairs
- Hospital beds
- Entertainment equipment
- Household equipment
- Adjustable office furniture
- Home care furniture and appliances
- Patient lift
- Treatment tables
- Visitor flow control
- Ventilation flaps
- Sun protection
- Rehabilitation equipment
- Motor home equipment

## 3. HIWIN linear actuators LAM

### 3.1 LAM1

#### Product specifications:

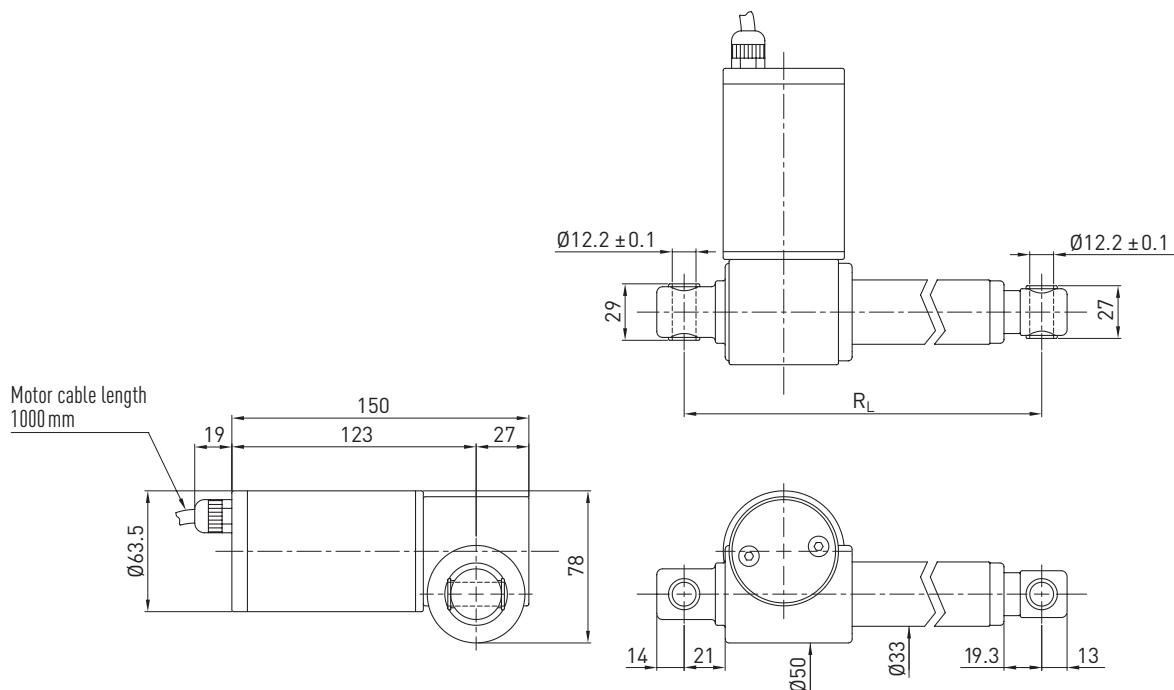

- Screw type: Ballscrew/ACME
- Weight (at a stroke of 100 mm): 2.31 kg
- Protection class: IP 54
- Operating temperature: +5 °C to +40 °C

#### 3.1.1 Order code

Linear actuator	LAM1	1	0	200	24	E	Customer specific model (This suffix is not used for standard versions)
Model:							Operating voltage: 12: 12 VDC 24: 24 VDC
Ballscrew: 1, 2							
ACME: 1A							Stroke [mm]
Type:							
0: Standard model (No limit switch retrofits)							
1: With external limit switches							

#### 3.1.2 Dimensions

#### LAM1-1/-2:

$$R_L = S + 153$$

#### LAM1-1A:

$$R_L = S + 162$$

R<sub>L</sub>: Zero stroke length [mm]

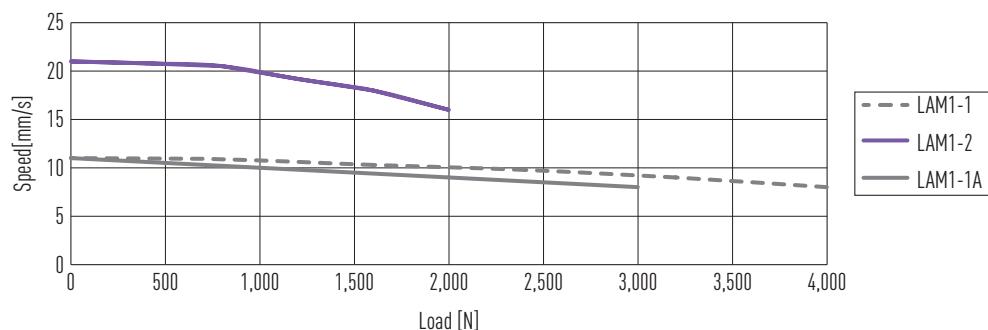

S: Stroke [mm]

### 3.1.3 Options for LAM1

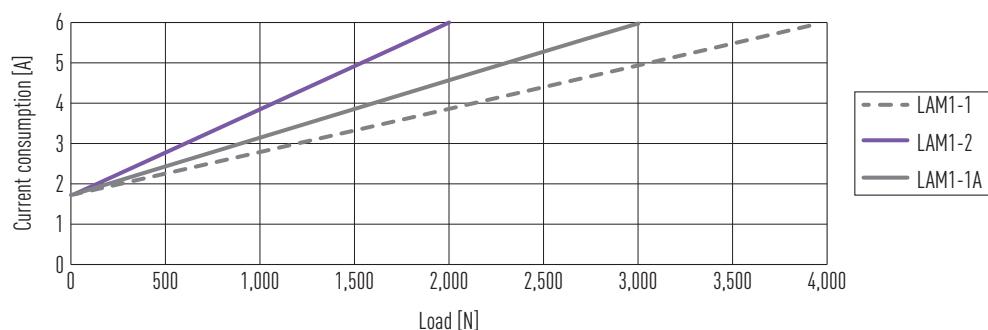

- Protection class IP 65
- Gear housing of S45C instead of aluminium (standard)
- Mounting points turned through 90°
- 36 VDC motor
- UL version (24 VDC)

### 3.1.4 Product characteristic curves and technical data

24/12 VDC motor

24 VDC motor

Type:								Operating voltage: 24: 24 VDC 240: 24 VDC (type with higher speed)
Stroke [mm]								

<sup>1)</sup> Thrust forces greater than tractive forces, and tractive force  $\leq$  50 % of the max tractive force

<sup>2)</sup> Tractive forces greater than thrust forces

#### 5.2.2 Dimensions

$R_L = S + 210$  for stroke < 200 mm;  $S + 260$  for stroke = 200 – 500 mm

$R_L$ : Zero stroke length

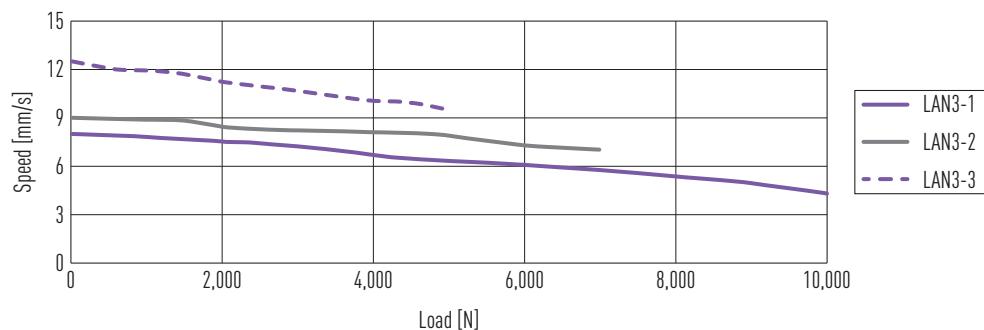

S: Stroke

### 5.2.3 Options for LAN3

- Protection class IP 66
- Potentiometric sensor, 10 kΩ:  
 $R_L = S + 221$  for stroke < 200 mm;  $R_L = S + 271$  for stroke = 200 – 500 mm  
 Max. stroke lengths with potentiometric sensor: LAN3-1: 250 mm  
                                   LAN3-2: 330 mm  
                                   LAN3-3: 420 mm
- Mechanical spline:  
 $R_L = S + 252$  for stroke < 200 mm;  $R_L = S + 302$  for stroke = 200 – 500 mm
- Safety nut:  
 $R_L = S + 222$  for stroke < 200 mm;  $R_L = S + 272$  for stroke = 200 – 500 mm  
 Safety nut + mechanical spline:  
 $R_L = S + 259$  for stroke < 200 mm;  $R_L = S + 309$  for stroke = 200 – 500 mm
- Mechanical quick release:  
 Max permitted load on the piston rod during the initiation of rapid lowering: 180 N. Mechanical lowering requires a minimum force of 700 N.
- Mounting points turned through 90°
- Fast motor 24V
- 36 VDC motor
- UL version
- External limit switches:  
 $R_L = S + 290$  for stroke < 200 mm;  $R_L = S + 340$  for stroke = 200 – 500 mm

### 5.2.4 Product characteristic curves and technical data LAN3, 24 VDC motor

24 VDC motor

24 VDC motor

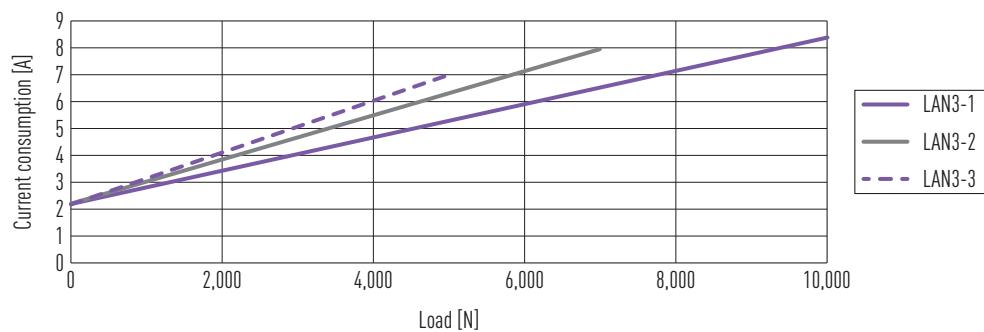

Table 5.5 Technical data LAN3, 24 VDC motor

Model	Max. thrust [N]	Max. pull [N]	Max. holding force [N]	Speed load=max/load=0 [mm/s]	Standard stroke S [mm]										Duty cycle [%]	Max. current [A] 24 VDC	Potentiometer resolution [Ω/mm]
LAN3-1	10,000	6,000	10,000	4.5/8	100	150	200	250	300 <sup>1)</sup>	350 <sup>1)</sup>	400 <sup>1)</sup>	—	—	10	8.3	37.5

<sup>1)</sup> Not available with option "potentiometric sensor"

### 5.3 LAN4

#### Product specifications:

- Screw type: ACME
- Weight (at a stroke of 200 mm): 2.33 kg
- Protection class: IP 54
- Operating temperature: +5 °C to +40 °C

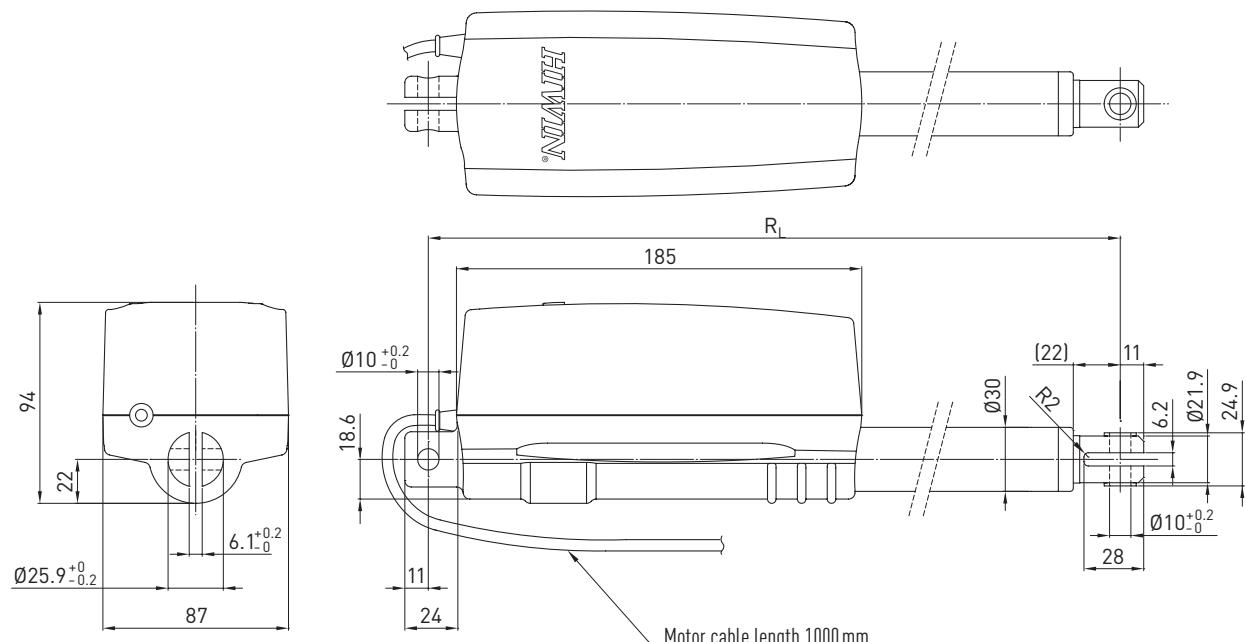

#### 5.3.1 Order code

<sup>1)</sup> The integrated overcurrent protection automatically switches off the linear actuator when an obstacle occurs.

#### 5.3.2 Dimensions

$$R_L = S + 160$$

R<sub>L</sub>: Zero stroke length

S: Stroke

# Linear Actuators

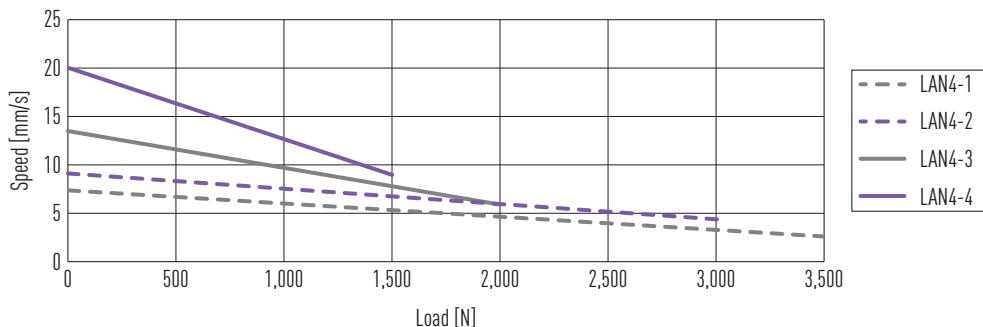

HIWIN linear actuators LAN

## 5.3.3 Options for LAN4

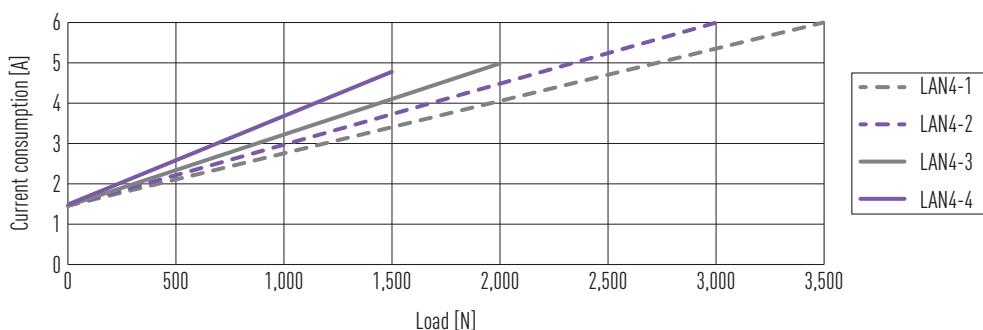

- Protection class IP 66
- Safety nut:  $R_L = S + 174$
- Jack plug: Ø 6.35 mm; mono
- Mechanical spline:  $R_L = S + 200$
- UL version

## 5.3.4 Product characteristic curves and technical data

24/12 VDC motor

24 VDC motor

12 VDC motor

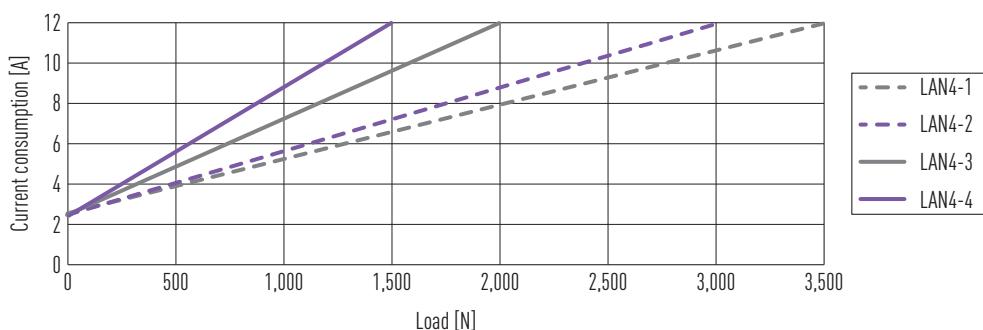

Table 5.7 Technical data LAN4

Model	Max. thrust [N]	Max. pull [N]	Max. holding force [N]	Speed load=max/load=0 [mm/s]	Standard stroke S [mm]								Duty cycle [%]	Max. current [A]	
					100	150	200	250	300	350	400	12 VDC		24 VDC	
LAN4-1	3,500	3,500	3,500	3.5/7	100	150	200	250	300	350	400	10	12	6	
LAN4-2	3,000	3,000	3,000	4.2/9	100	150	200	250	300	350	400	10	12	6

## 5.4 LAN5

### Product specifications:

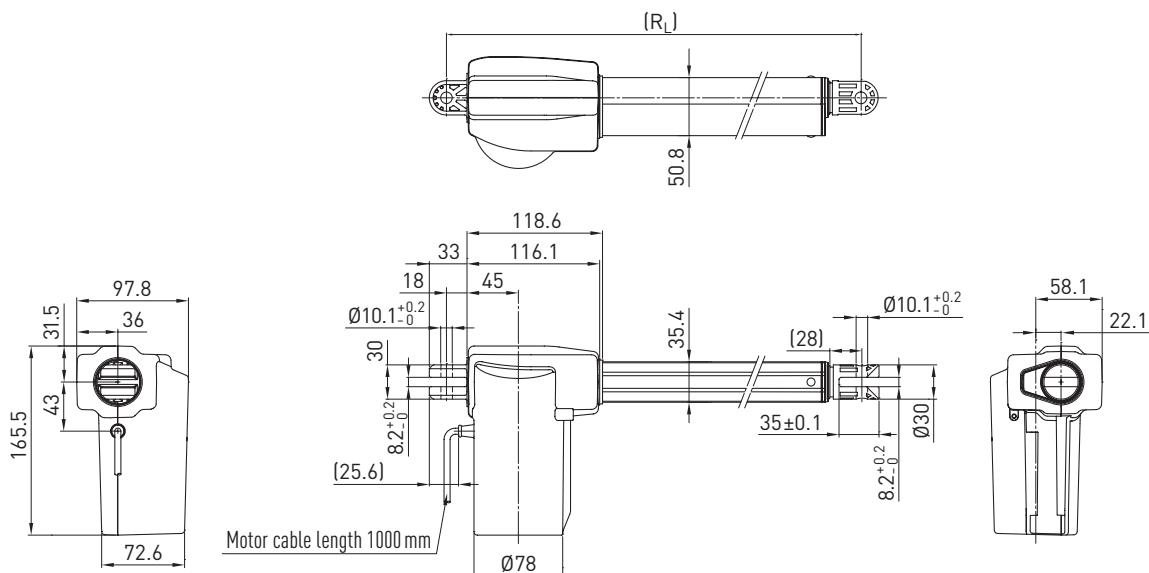

- Screw type: ACME
- Weight (at a stroke of 200 mm): 1.96 kg
- Protection class: IP 54
- Operating temperature: +5 °C to +40 °C

### 5.4.1 Order code

	LAN5	1	1	1	200	24	G	E	
Linear actuator									Customer specific model (This suffix is not used for standard versions)
Model									Colour: B: Black G: Grey
Load direction:									Operating voltage: 24: 24 VDC 240: 24 VDC (type with higher speed)
1: Standard									
Type:									
1: With internal limit switches									
Stroke [mm]									

### 5.4.2 Dimensions

$$R_L = S + 163$$

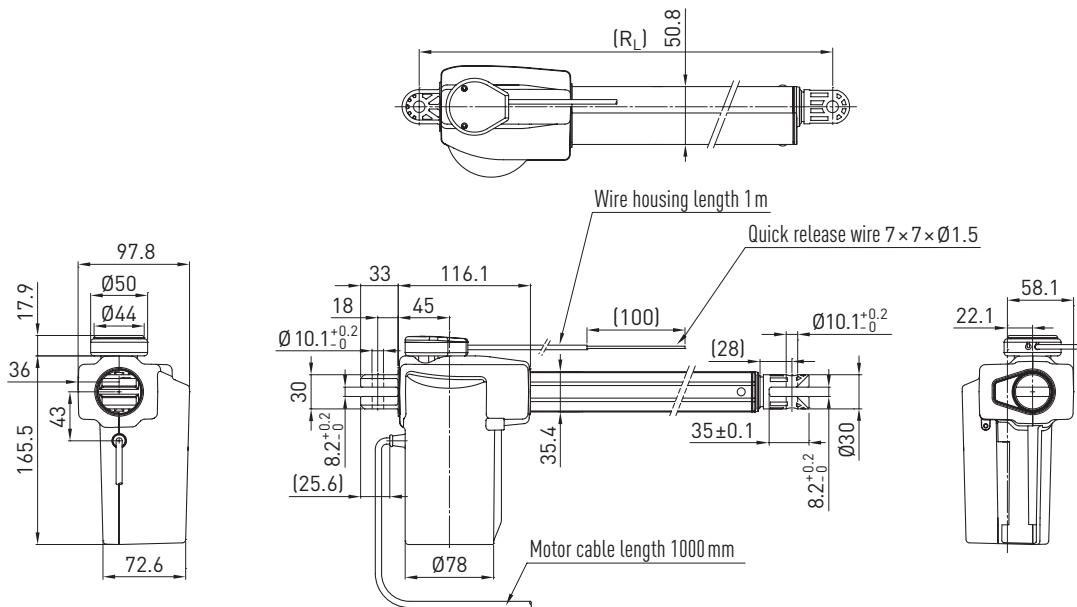

R<sub>L</sub>: Zero stroke length

S: Stroke

# Linear Actuators

HIWIN linear actuators LAN

Dimensions LAN5 with mechanical quick release

$$R_L = S + 163$$

R<sub>L</sub>: Zero stroke length

S: Stroke

### The quick release function:

- Quick release can be initiated when the load is less than 100 N.
- Once quick release has been initiated, the load must be at least 700 N. The cylinder can then retract automatically.
- After initiation, the cylinder may have to be retracted.

Table 5.8 Encoder specifications (Hall sensor)

	Supply voltage		
	24 VDC	12 VDC	5 VDC
Output	High level 24 VDC	High level 12 VDC	TTL
	Low level 0.2 V/10 mA	Low level 0.2 V/10 mA	—
	NPN	NPN	—

### 5.4.3 Options for LAN5

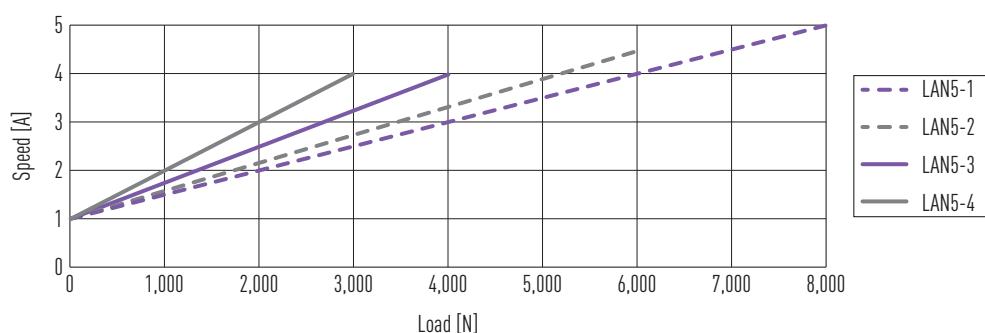

- Hall sensor
- Safety nut
- Mechanical spline
- Mounting points turned through 45°, 90°, 135°
- Protection class IP 65, IP 66
- Large mounting point diameter 12.1 mm
- Mechanical quick release, for LAN5-3 and LAN5-4 only
- UL version

#### 5.4.4 Product characteristic curves and technical data LAN5, 24 VDC motor

24 VDC motor

24 VDC motor

24 VDC motor

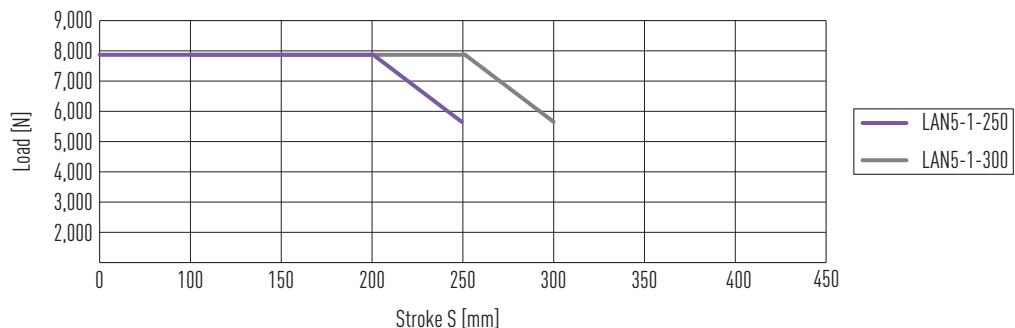

Table 5.9 Technical data LAN5, 24 VDC motor

Model	Max. thrust [N]	Max. pull [N]	Max. holding force [N]	Speed load=max/load=0 [mm/s]	Standard stroke S [mm]					Duty cycle [%]	Max. current [A] 24 VDC	Hall sensor resolution [mm/pulse]
<b>LAN5-1<sup>1)</sup></b>	8,000	4,000	6,000	2/3.5	100	150	200	250	300	10	5.0	0.08
<b>LAN5-2</b>	6,000	4,000	5,000	3/4.5	100	150	200	250	300	10	4.5	0.10
