

Product information sheet

R-Clean Intral

Interior household cleaner with alcohol and lactic acid.

Product description

R-Clean Intral is used as a spray cleaner or general cleaning product in the interior of living- and working rooms, hospitals, offices, restaurants etc. It can be used on all kind of surfaces like wood, painted surfaces, metal, glass, plastic and stone. Doors, windows, tables, desks and all kinds of furniture are cleaned properly and without stripes or stains with Intral. In the use-concentration this product has the same pH-value as the skin: 5,5. This means that it is very mild to the skin and safe to use on any surface, which is resistant to water.

Because R-Clean Intral is highly concentrated, only a very small amount of the product is necessary to make a ready-for-use solution. The product contains alcohol, but is not flammable and absolutely not dangerous. Lactic acid, also one of the components, is an organic product, which is very good biodegradable. This is also the case for the detergents in R-Clean Intral.

Instruction

Both for spraying and for general cleaning a dosage of 5ml to 10ml/litre is sufficient. From the 5 l. can the product can easily be pumped in the spray bottle and diluted with water. These dosage pumps are available with the product.

Chemical-technical information

- Description: blue liquid
- pH-value: 5,5
- Density: 1,0 g/cm³

Packaging information

Pack size: 1x 12 litre – 2x5 litre
Item Number: 500001202301
